BE PREPARED! BE SAFE!

Permethrin

The new Boy Scout Handbook recommends clothing treated with permethrin to help keep biters away.

Permethrin is a pesticide that you spray on clothing to kill black flies, ticks, and mosquitoes but has no harmful side effects on humans if used properly. It is the active ingredient used in Insect Shield and Buzz Off clothing and kills bugs when they land on your clothing. You can buy Permethrin in liquid form and spray it on your own clothes to the same effect. This self-applied form lasts for 4-6 washings. Permethrin was developed by the U.S. military to protect soldiers from insects in the jungle.

You can buy [Permethrin on Amazon](#) and Walmart. A big bottle comes with a spray adapter and will cover 4 complete sets of clothing, including shirts, pants, and socks. You'll want to read the directions carefully before applying it, but it's not difficult to do. You need to spray it on the clothes you plan to wear hiking or for any outdoor activity in a windless but well ventilated place like a garage. Let them dry for a few hours and you're all set.

When you spray the Permethrin on, you want to position the sprayer 6 to 8 inches away from the clothing you plan to treat. Pay particular attention to the cuffs of long pants and shirt sleeves where ticks will try to attack you. It's also a good idea to spray it on your hat

As a treatment for clothing, Permethrin clothing insect repellent does not harm fabrics and is odorless after it dries. Use Permethrin on clothing by itself or with skin-applied repellents to create the ultimate protective, armor-like insect barrier. Permethrin-treatments on clothing are non-toxic to humans and are registered for use by the U.S. EPA.

Permethrin insect repellents are for use with clothing, tents, and other gear. During the drying process, it tightly bonds with the fibers of the treated garment. It will not stain or damage clothing, fabrics, plastics, finished surfaces, or any of your outdoor gear.
